

Verano[®] MAKE THIS YOUR MOMENT

VERANDAS

Do you also enjoy spending your free time in the open air with friends and family? It would be ideal if you are less dependent on the weather conditions, so that your activities are not hindered by rain or wind! A cosy winter barbecue with friends or breakfast on Sunday mornings with the whole family, lovely right?

■ ■ ■ MAKE THIS YOUR MOMENT

We want it to be about you. That you can enjoy your house, both inside and outside, every moment of the day! A nice living environment gives you the ultimate feeling of coming home. With the verandas of Verano® you can create a safe and comfortable home of your house and you are completely in control of your living environment. Make this your moment!

OUTSIDE AIR IS HEALTHY

At the end of winter, we all yearn for life outside again. Spring cannot start early enough. The outside air and the sun immediately give us new energy in the spring. Scientific studies have shown that outside air provides more mental energy, better concentration and less stress. In short: being outdoors is healthy! With a veranda you can enjoy extra living space in the open air and it offers you protection from the effects of sun, rain and wind all year round.

FOUR SEASONS PRODUCT

Verandas are an enrichment of your home and your garden. There is a suitable solution for every type of terrace and for every garden need. Verandas are placed on the terrace and mounted on the facade. The glass or polycarbonate roof is slightly sun and heat resistant, glass also withstands about 50% of the UV rays, this means that not all solar and UV rays are blocked. This way you have warmth in the spring and shelter in the autumn! On tropical days the solar heat is less pleasant. But no worries, this can be solved with veranda sun protection that has the same protective effect as an awning. In addition to shelter, a veranda creates extra living space and increases the value of your home. And perhaps most importantly: you can enjoy the outdoors all year round. Garden parties are no longer rained out and you can leave your outdoor furniture carefree in the autumn and winter.

SAFE GARDEN EXPERIENCE

Safety is very important both in and around your home. Therefore, our verandas have been thoroughly tested and provided with CE marking. The CE marking shows that the verandas comply with the strictest European safety guidelines. If you purchase a veranda from Verano® you are sure that it meets strict European safety regulations. Verandas and conservatory awnings without CE marking involve safety risks, so it is very important that you make an informed choice.

SUSTAINBLE ALUMINIUM

The profiles of our verandas are made of high-quality aluminium. Aluminium has the great advantage that it is strong and solid, but also light in weight. Moreover, aluminium has the characteristics that it is almost maintenance-free and guarantees a long service life. We are proud owners of the AluEco certificate. The AluEco foundation promotes sustainability and ensures the recycling from aluminium to high-quality products.

GUARANTEED QUALITY

We are fully convinced of the quality of our products, therefore you receive a warranty of no less than five years. Our products can be recognized by the chrome-coloured brand logo and the sticker with the unique product code on the back of the user manual.

Anthracite textured

*Our profile colours look even better in real life! Therefore always ask your Verano® partner for colour swatches.

ROOF TYPES

Verandas are mounted on the facade. Large terraces can thus be perfectly provided with shade and shelter, creating a pleasant living space under the veranda. Depending on your specific requirements, you can choose from a veranda with a glass or polycarbonate roof. Do you have any doubts which type of roof is most suitable for your terrace? Your Verano® partner is happy to give you expert advice.

POLYCARBONATE

Polycarbonate is self-extinguishing, has a very high impact resistance, high toughness and a relatively high mechanical load capacity. Polycarbonate is almost unbreakable and protects against UV rays. We use standard polycarbonate roof plates with a thickness of sixteen millimetres. Polycarbonate is specially prepared for the veranda. The open sides (top and bottom) of the roof plates are taped to protect the cavities from moisture and dirt. Three versions are possible: clear polycarbonate, opal polycarbonate and sun-resistant polycarbonate.

- **Clear polycarbonate**

If you are looking for a high degree of light, clear polycarbonate is the most suitable. Clear polycarbonate lets a high degree of daylight through.

- **Opal polycarbonate**

The most common type of polycarbonate is the version in opal. Opal polycarbonate is 40% translucent and milky white in colour. Opal polycarbonate significantly reduces the incidence of sunlight.

- **Sun-resistant polycarbonate**

If you have a terrace with lots of sun hours, we recommend sun-resistant polycarbonate. Sun-resistant polycarbonate is heat-resistant and therefore maintains a pleasant temperature on your terrace. Sun-resistant polycarbonate roof plates also protect against UV radiation on both sides.

LAYERED SAFETY GLASS

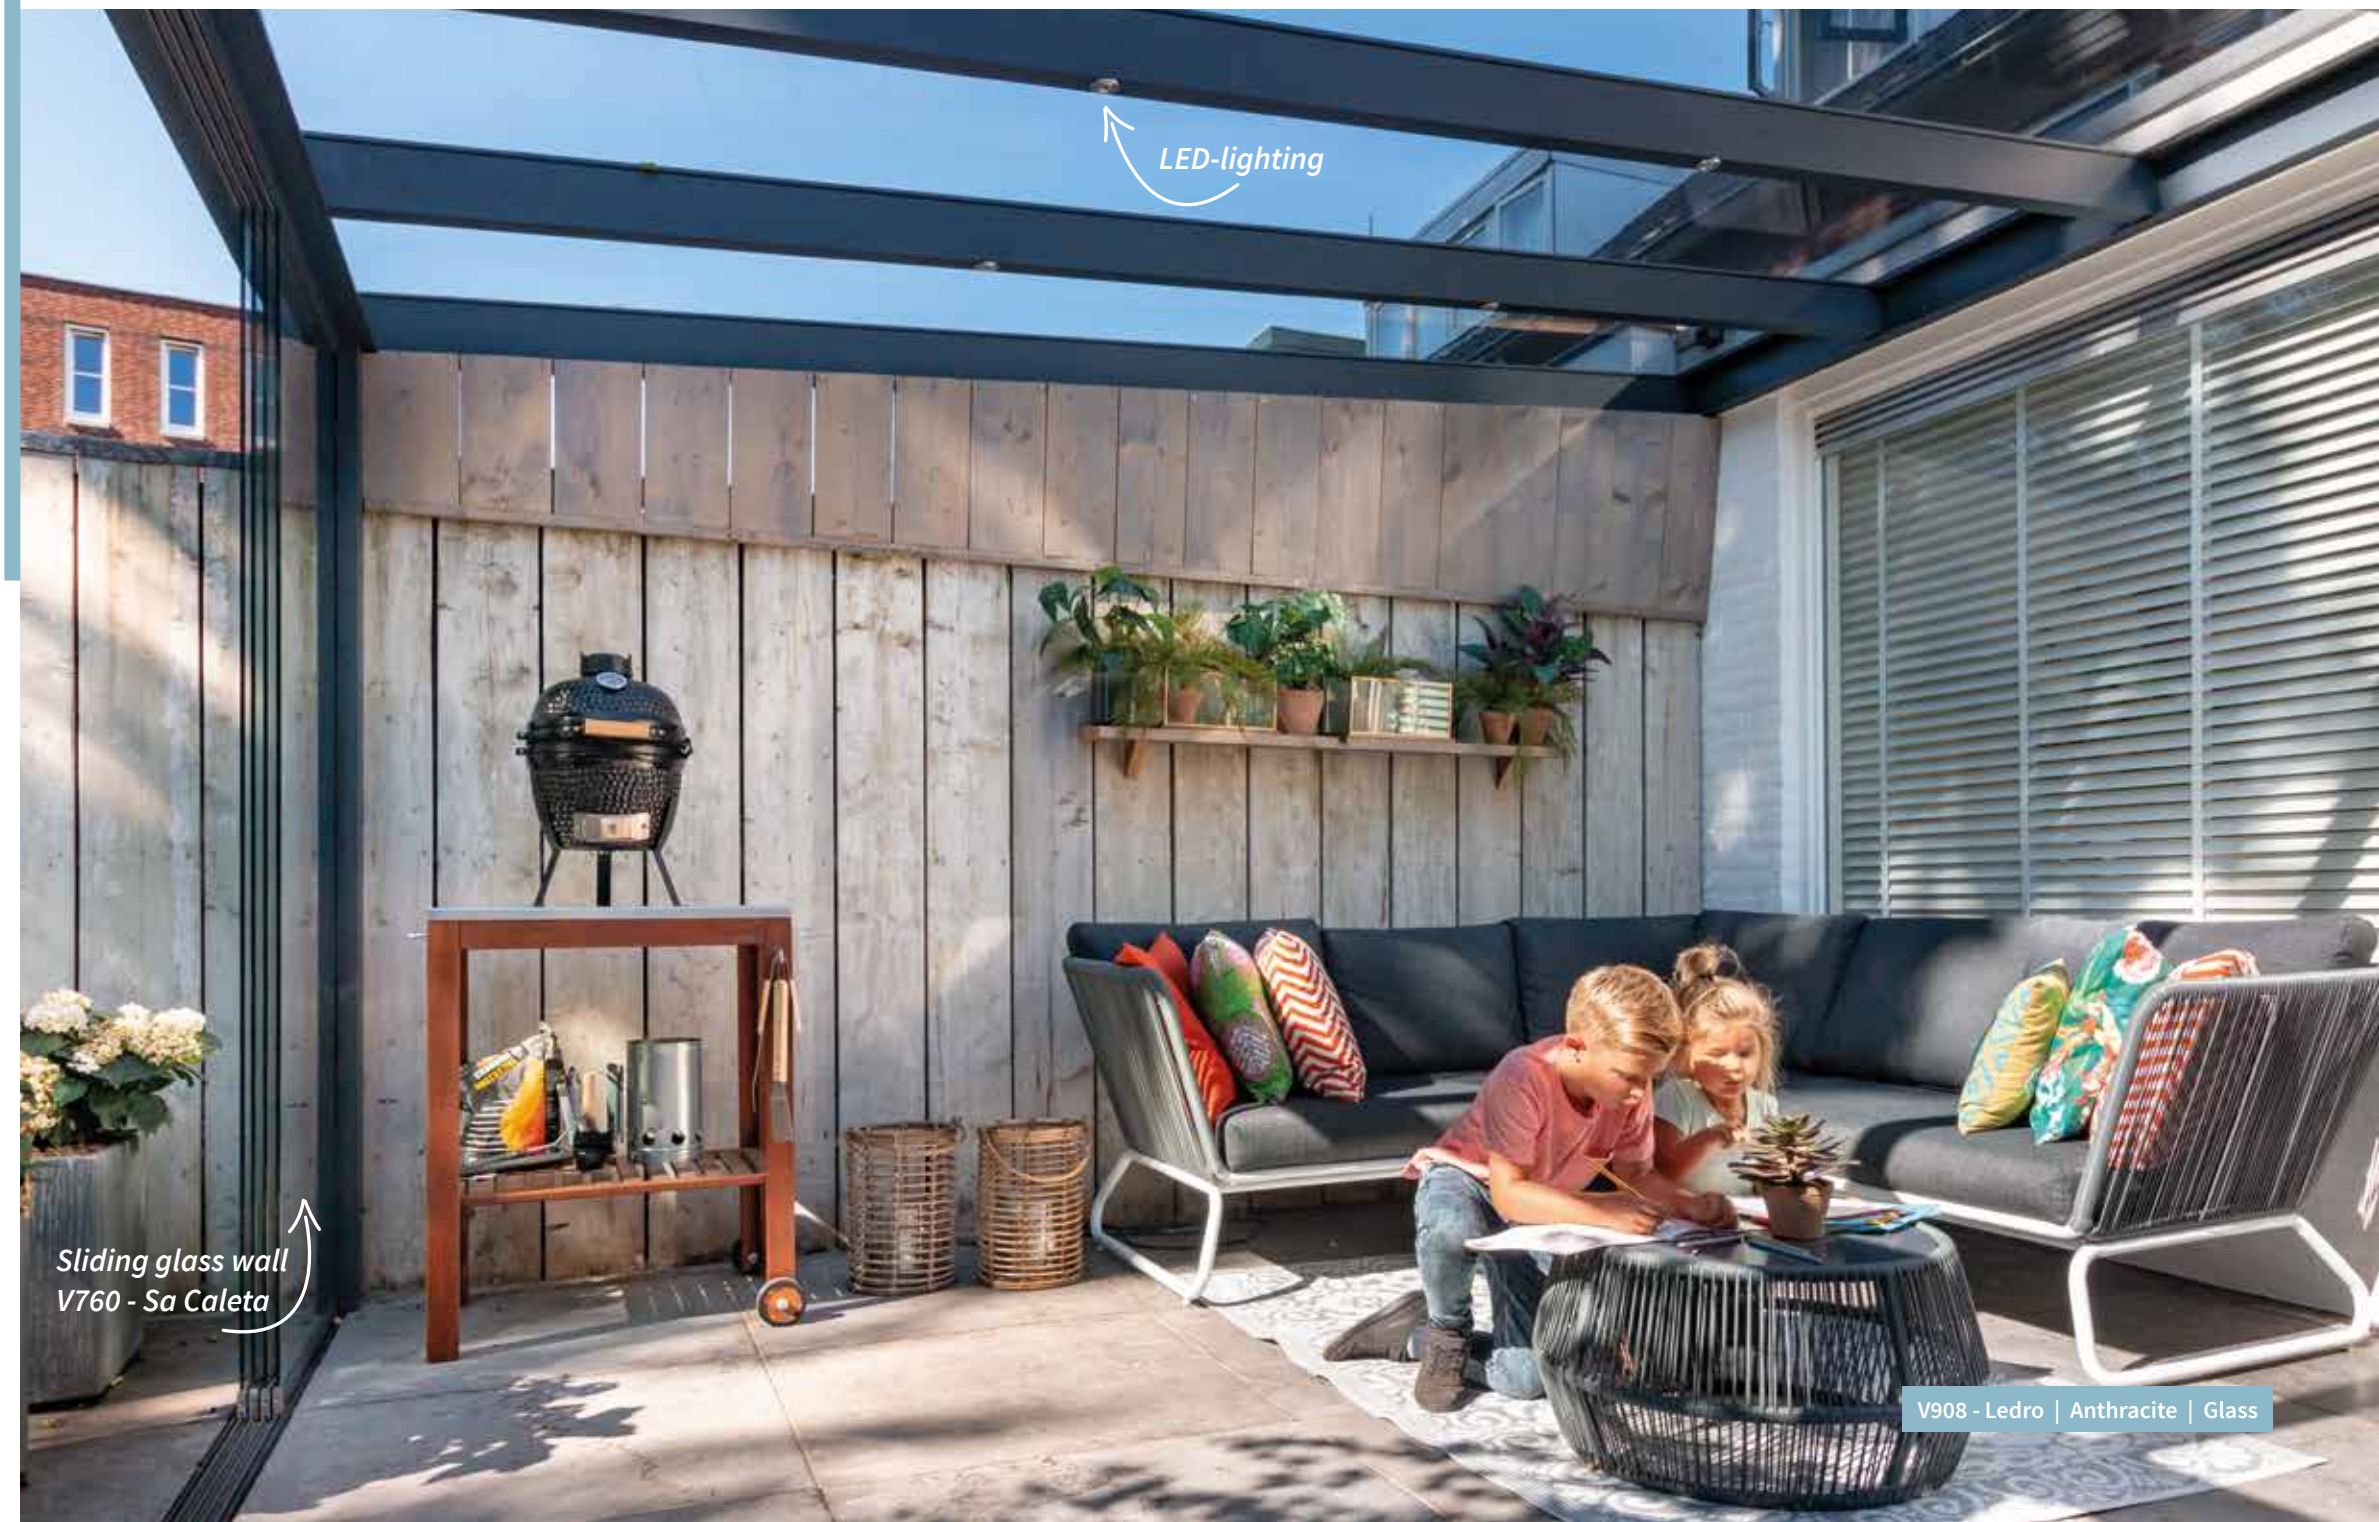

Glass is transparent and therefore always ensures a pleasant incidence of sunlight and daylight and preserves the view to the outside. Glass is weather resistant, scratch-resistant and retains its shape at high and low temperatures. Two types of glass are possible for verandas: layered safety glass 44.2 and layered safety glass 55.2. Layered safety glass can be recognized by the layer of foil that is applied between the glass plates. This layer holds the glass fragments together in the event of a broken glass. Both types of glass are available in clear or milky white.

- **Layered safety glass 44.2**

In the case of laminated safety glass 44.2, two glass plates of four millimetres thick are held together by two layers of foil. Layered safety glass 44.2 weighs 20.50 kilograms per square meter.

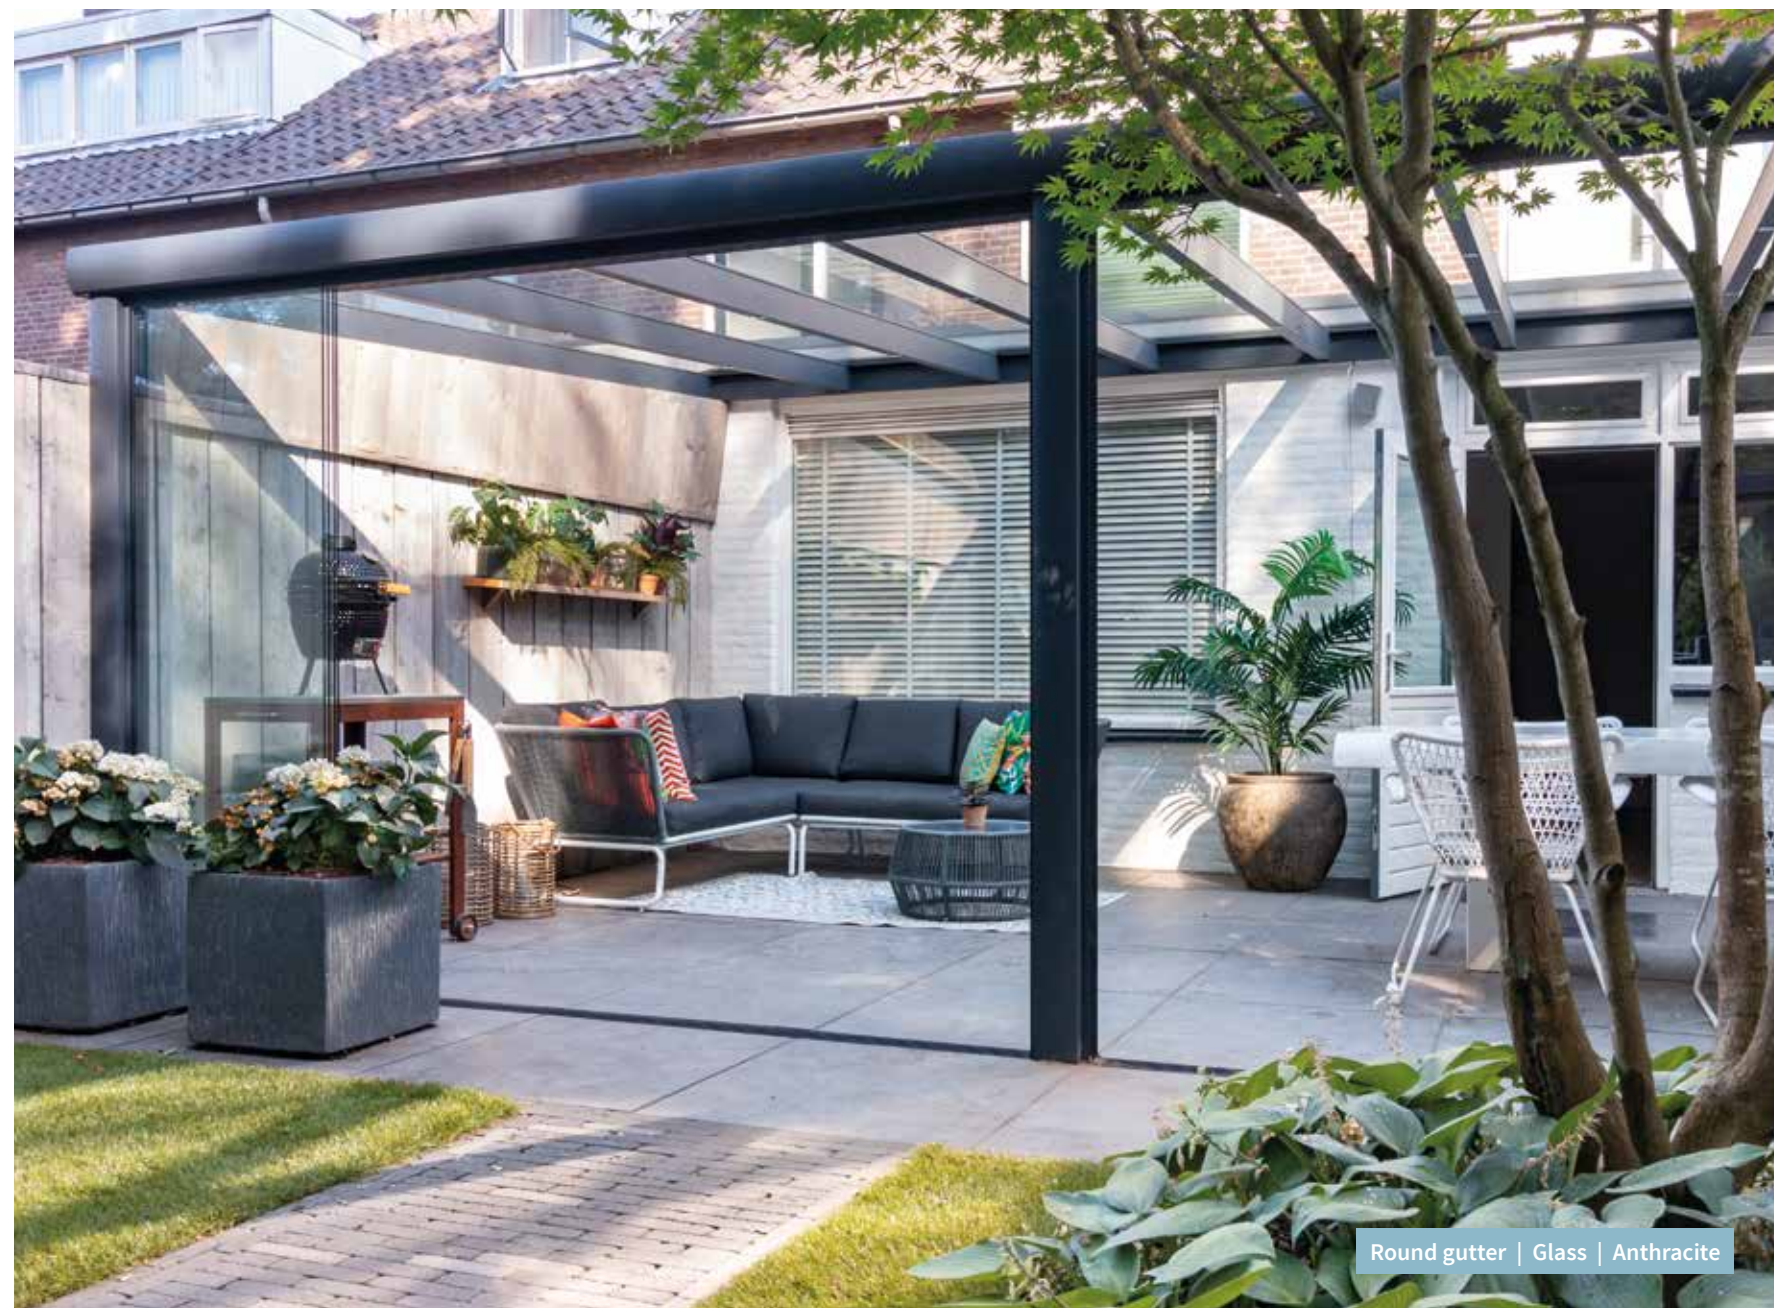

- **Layered safety glass 55.2**

In the case of layered safety glass 55.2, two glass plates of five millimetres thick are held together by two layers of foil. Layered safety glass 55.2 weighs 25.50 kilograms per square meter.
